Servo motor applying solutions

Vertical lathe's coordinate axis servo drive solution

CTB high power servo motor can supply power for coordinate axis drive of heavy duty machine tools such as single column vertical lathe, double column vertical lathe, heavy duty horizontal lathe, gantry machine tool, floor type boring and milling machine.etc, which can make the coordinate axis drive of heavy duty machine tools to realize their servo and automation control.

- ◇ Manual independent operation coordinated with CTB servo drive can achieve hand wheel control, single shaft locating, operation monitoring;
- ◇ Interface with various CNC control system to complete interpolation control and make machine tool numerical controlled;
- ◇ Ultra-low speed feed, operate smoothly, strong overload capacity;
- ◇ Rapid traverse with high speed,utilize constant power feature of the motor to achieve high-speed rapid traverse.

Planer milling machine working table drive solutions

CTB high power servo motor with high control performance applied to working table drive of planer milling machine, which has greatly improved work efficiency and performance of planer milling machine, can completely replace DC motor, switch reluctance motor, variable-frequency and speed motor.

- ◇ Simple and reliable settings of work table travel via parameter to minimize idle stroke and improve working efficiency of planer milling machine;
- ◇ Smooth start and reversing, avoid mechanical shock, reduce equipment failure rate;
- ◇ Easy to interface with different CNC control system and realize the functions of planer milling machine.

Spindle motor applying solutions

◆ Using the low speed motor without reduction gear

As CTB's low speed motor can drive machine tool spindle directly, so the reduction gear with the speed ratio within 1:10 can no longer be needed, as a result, the spindle mechanical drive can easily be achieved and has low noise; meanwhile, production cost and machinery failure rate go down.

Can be widely used in spindle drive of floor type boring and milling machine, heavy duty horizontal lathe, vertical lathe, planer milling machine etc.

◆ Using the AC spindle motor for the substitute of DC motor

CTB's high-power AC spindle motor can replace traditional DC motor and can be widely used in spindle drive of floor type boring and milling machine, heavy duty horizontal lathe, vertical lathe, planer milling machine, etc.

- ◇ Smaller volume compared with same power DC motor, easy installation;
- ◇ Wide range of speed and constant power speed;
- ◇ Low running noise, free maintenance.

◆ Installation figure(suitable for vertical machining center)

The formulas below describe the relationship between power, torque and speed of spindle motor:

$$P=n \times T / 9550 (\text{kW})$$

$$T=P \times 9550 / n (\text{N}\cdot\text{m})$$

$$n=P \times 9550 / T (\text{r/min})$$

◆ Application area
